

# CLOSING THE LOOP

2

Trucks transport raw materials to the factory

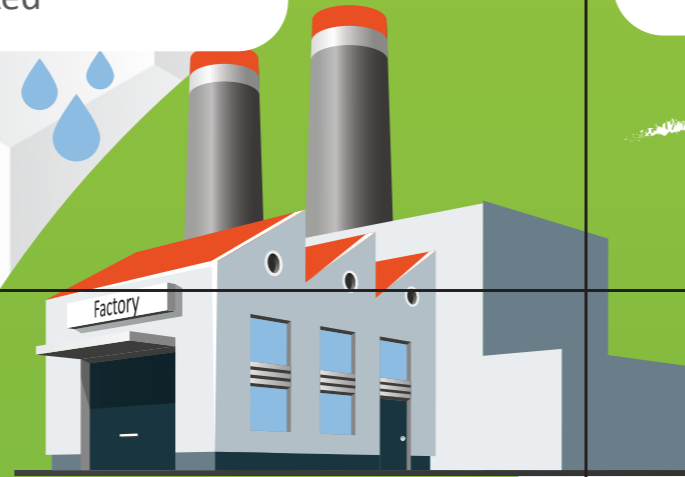

1

Raw materials are cut down or mined

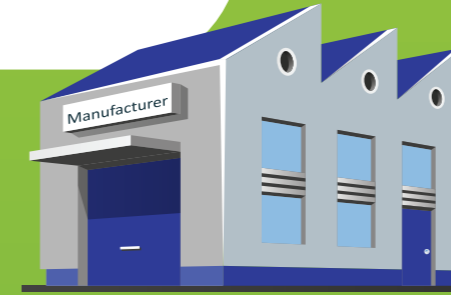

3

At the factory the raw materials are heated up and mixed

4

The new material then goes to the manufacturer

5

The manufacturer shapes and fills the new material to make a product

6

The products are transported to the shops for people to buy

7

The products are bought and then used.

10

Trucks carry the bales back to the factory to be recycled.

9

At the MRF the recyclable materials are separated, sorted and made into bales.

## RETHINK REUSE RECYCLE

8

The packaging/materials are thrown into the recycling bin
