Maryborough CBD Sewer Rehabilitation

— Rehabilitated Sewer Mains

BACKGROUND

The Maryborough CBD Sewer Rehabilitation Programme was finished in December 2019 and resulted in the renewal of 1,600m of sewer gravity mains, some of which were installed 80 years ago during the original Maryborough Sewage Scheme works. These sewers had developed issues such as: breaks, cracks, root infestations, and joint displacement which resulted in operational issues including blockages, groundwater infiltration, and potentially exfiltration.

This project was undertaken by Wide Bay Water's Sewer Relining Contractor, Relining Solutions Pty Ltd. The total project cost was \$234,000.00 exclusive of GST. These works are being funded by Works for Queensland Round 3.

The Maryborough CBD Sewer Rehabilitation Programme is a joint initiative of Fraser Coast Regional Council and the Queensland Government.
